

Harp seals

By Mia

Awesome adaptations

Harp seals are awesome! They have white and black blubber to camafloge with the snow. Harp seals have dark eyes to attract the heat. That's cool!

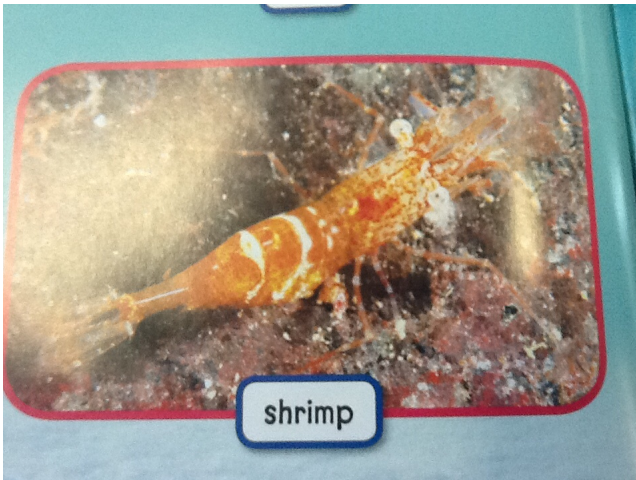

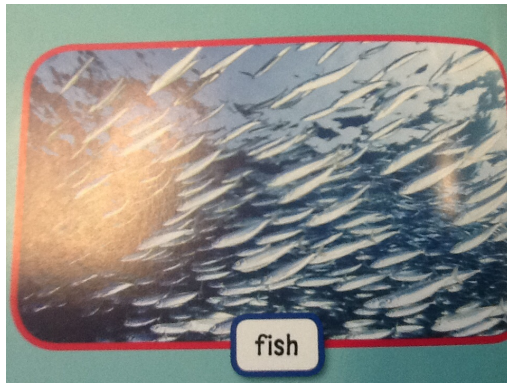

*They get black furry faces when
they are oldder. There teeth are
pointy.*

Where they live

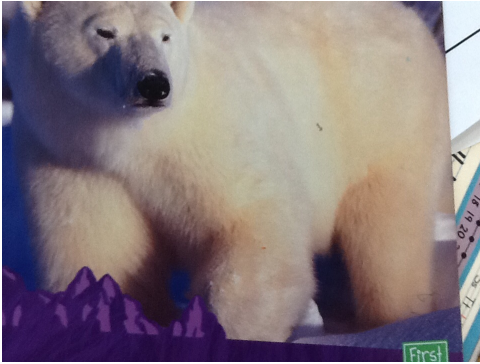

*Harp seals live in the Arctic
Ocean and the North Atlantic
Ocean.*

Dinner time!

Did you know that Harp Seals are carnivores. That means they are meat eaters. They swallow their food wholes. That's amazing! They eat fish and shrimp.

Look out!!!

Harp seals have a lot of predators the predators are Polar bears, Killer whales, Whales, Sharks, Orcas, Arctic Fox's and People

Awesome facts about Harp seals

An adult Harp seal can fall deep deep asleep while they are floating in the water or if they are on ice floating on water! A Harp seal female gives birth on chunks of ice.

Speaking of females they are a bit smaller than males. They are mammals. Harp seal pups get their blubber from their mothers that's amazing!!
