Introduction 1

Availability of Social Media Elements 2

Introduction

If you have *Social Media Framework*, you may be able to add one or all of these social media elements to your apps. Whether you can add a particular element depends on which settings and elements your Site Administrator has enabled. Site Administrators may enable RSS feeds regardless of whether or not you have *Social Media Framework*.

- Community Editing: Allows visitors to your website to contribute to your app.
- Visitor Commenting: Allows visitors to comment on your app.
- Visitor Rating: Allows visitors to rate your app.
- RSS Feeds: Allows visitors to subscribe to Really Simple Syndication (RSS) feeds for your app.

You enable social media elements on the App Options dialog for each app. When enabled, Community Editing and RSS Feeds apply to the entire app and not to individual records within that app. For example, Community Editing and RSS Feeds apply to the entire File Library rather than to each file within that File Library. So once enabled for that File Library app, visitors can add files to the File Library and if they use the RSS Feed, they will see the entire File Library on their home pages.

Choose the social media elements you'd like to allow for your app. Additional controls will display for some checked elements.

<input type="checkbox"/>	Community Editing Allow visitors to edit or contribute to your app.
<input type="checkbox"/>	Commenting Allow visitors to comment on your app.
<input type="checkbox"/>	Rating Allow visitors to rate the content in your app.
<input type="checkbox"/>	RSS Feeds Allow visitors to subscribe to RSS feeds for your app.

A Site Administrator must enable RSS Feeds for the entire website through a global setting in System Settings in order for you to enable it for your apps.
