## Lincoln Public Schools

Mary L. Sterling, Ph.D.
Assistant Superintendent of Schools

To: School Committee
From: Mary Sterling
Re: Report on the 2011 MCAS Results
Date: October 14, 2011

This report presents the 2011 MCAS testing results for the Lincoln School district, administered by the Massachusetts Department of Elementary and Secondary Education. Three key dimensions are delineated and discussed for both the Lincoln and Hanscom schools, with appendices to provide specific data:
I. Performance Levels: How did students perform relative to the expectation of proficiency in English language arts (ELA), mathematics, and science/engineering?
II. Adequate Yearly Progress (AYP): How did the district and schools progress towards meeting the federal goal of $100 \%$ proficiency in ELA and mathematics by 2014 ?
III. Student Growth: How did students individually grow in performance over the past few years of MCAS testing?

A closing section discusses the district's action steps to promote proficiency and growth for all students.

## Part I Performance Levels

## Lincoln School

English language arts - (see detailed scores in Appendix A, pages 1, 2)
The Lincoln School students demonstrated strong performance in ELA. In grades 3-8, 85\% of students score at proficient or higher levels. The Lincoln School performance is well above the state level, especially in the percentage of scores at the advanced level. Consistent with longitudinal data, the percentage of scores at proficient and advanced levels increases when comparing scores at grade 3 to those at grade 8. Scores at the advanced level jumped at grade 5 to $33 \%$ and stayed steady through grade 8. The percentage of scores at Needs Improvement and Warning levels dropped significantly at grade $6(9 \%)$ and stayed low through grade 8 .

The cohort growth chart (Appendix A, p. 6,) shows that scores maintain a four year trend of increasing levels of proficiency in Lincoln School across grades. Highlights include these points about the combined percentage of advanced and proficient scores in the following grades:

- Grade 5: $85 \%$ compared to $71 \%$ in grade 4,2010 , characterized by a 23 point increase in percentage of advanced level scores
- Grade 6: $90 \%$ compared to $77 \%$ in grade 5,2010 , characterized by a 18 point increase in percentage of proficient scores
- Grade 7: $91 \%$ compared to $91 \%$ in grade 6,2010 , characterized by decline in percentage of advanced scores and a rise in percentage of proficient scores
- Grade 8 : $88 \%$ compared to $81 \%$ in grade 7,2010 , characterized by 13 point increase in percentage of advanced scores

Results for students in subgroups at the Lincoln School have not been as strong as the overall school performance. Students whose scores are reported in subgroups of income, race and ethnicity, disabilities, and English language learner (ELL) typically did not score at advanced levels of performance and a significant number fall below proficient levels of achievement. This pattern of difference between overall performance and subgroup performance has been true for several years.

A set of data about subgroup performance for ELA in all grades at Lincoln School is included in Appendix B; it shows the percentage of each group's scores in each performance level. The chart shows clear contrasts between students whose scores are reported in a subgroup and those not classified in that group. The data show significant differences in performance between students of color and white students; between students with disabilities and those who are non-disabled, students with "high needs" and those who are not in that category. Two words of caution: first, in this chart the percentage of students in a subgroup is given for each level but the actual number of students is not. Yet the numbers are so small that one or two student scores can vary the percentage results significantly. For example, the chart shows that the " N Included" - the total number of ELL students in grades 3-8 - is 17. The data show that $6 \%$ of those 17 students scored in the advanced level: that percentage represents 1 student. $59 \%$ of ELL students scored in proficient levels (a group of 10 students), and $35 \%$ scored in the Needs Improvement level (6 students). If just one student's score were changed at any level, all percentages would be significantly altered.

The second caution is that for many of the students whose scores are reported in one subgroup, the scores are also reported in another subgroup. For example, a student whose scores are reported in the "Low-Income" subgroup, may also be classified in the "disability" subgroup and therefore, those same scores are reported in both places and impact the performance levels. Preliminary analysis of the subgroup data shows that the large majority of students whose scores are below proficient in ELA and in mathematics are classified as belonging to least one subgroup and more than half have scores reported in two or more subgroups. Further analysis in the coming weeks will determine the precise pattern of overlapping subgroups categorization in both subject areas. The district takes seriously the evidence of difficulty in performance by students in these subgroups. Each student who scores below the proficient level will be given opportunities and instruction to strengthen his or her understanding and skill in English language arts.

An analysis of ELA performance on different types of questions and in the three strands of Language, Reading, and Writing reveal both strengths and areas for growth at the Lincoln School. Overall, the performance in questions about language and reading reveals the students in grades 3-8
have strength in topics such as "understanding a text," "genre," and "vocabulary." The scores on the long composition for grades 4 and 7 show greater strength in conventions than in craft. The older students scored higher than the younger students in their composition performance ( $73 \%$ points correct at grade $7 ; 64 \%$ points correct at grade 4 ). Nonetheless, the goal of improving composition skills will remain a priority for students in all grades. As is true in the district and in the state, Lincoln School students perform better on multiple choice questions than they do on short answer or open response questions. The percentage of points correct on Open Response increased from the younger grades (grade 3: 65\%) to the older grades (Grade 8: 75\%). Also, at most grade levels, students scored slightly better in Open Response than they did the previous year when they were a year younger. However, the percentage of points correct in these topics still needs to increase; improvement in responding to open response questions remains a goal at the school and in the district.

Mathematics - (see detailed scores in Appendix A, pages 3, 4)
In mathematics at all grade levels, Lincoln School students score consistently higher than students across the state in percentage of scores at advanced and proficient levels. Overall, students show stronger performance at the earlier grades than the older grades: $81 \%$ of 3 rd graders scored at proficient or higher levels whereas $70 \%$ of 8 th graders scored at proficient levels or above. On the other hand, by $7^{\text {th }}$ and $8^{\text {th }}$ grade, the spread of scores changes: the percentage of advanced scores exceeds the percentage of students scoring at the proficient levels yet there is a slight increase of scores at the warning levels compared to earlier grades.

The cohort growth chart, (Appendix A, page 6) shows that each cohort varied in terms of growth over four years, since 2008. Highlights include the following points about the combined percentage of advanced and proficient scores in the following grades for a two year period:

- Grade 5: $83 \%$ compared to $60 \%$ as 4 th graders in 2010 , characterized by a 31 point increase in percentage of advanced scores (43\%)
- Grade 6: $70 \%$ compared to $68 \%$ as 5 th graders in 2010 , characterized by a decline in advanced scores and a rise in proficient scores
- Grade 7: $76 \%$ compared to $78 \%$ as 6 th graders in 2010 , characterized by a 4 point decline in percentage of advanced scores (still high at $47 \%$ ) and an increase in warning scores ( $10 \%$ )
- Grade 8: $70 \%$ compared to $72 \%$ as 7 th graders in 2010, characterized by an 11 point increase in percentage of advanced scores ( $39 \%$ ) and yet a total of $13 \%$ scores at the warning level

Mathematics scores for students in one or more subgroups trail behind the performance of the whole group, as has been true in the district and the state for several years. A set of data about subgroup performance for mathematics in all grades at Lincoln school is included in Appendix B: it shows the percentage of scores at each performance level for each group. The two cautions discussed in the subgroup results for ELA also apply in mathematics. First, the percentage of students in a subgroup is given for each level but the actual number of students is not. Again, it is important to note this because one or two student scores can vary the percentage results significantly. Second, the majority of students whose scores are reported in one subgroup are also reported in another subgroup. As in ELA, the performance differences are clear between students whose scores are reported in a subgroup and those whose scores are not, thus possibly confusing the results in each group.

One subgroup is of particular concern in the mathematics testing: African-American students in grades 3-8. The combined advanced and proficient scores for the 41 students in this group totaled $32 \%$ compared to the combined scores of $75 \%$ for the total population ( 411 students). The achievement gap described by these scores contributes to the AYP results for Lincoln School, discussed below. The gap is also a key driver behind the district's renewed effort to adopt strategies to narrow achievement gaps. Continuing analysis of the item responses of each student whose scores are reported in subgroups will provide more specific information to use in addressing needs, particularly of those who have scores in the Needs Improvement and Warning levels.

An analysis of mathematics performance on different types of questions shows some gain since 2010. In grades 3-8, the average percentage of possible points correct for questions in all categories ranged from $79 \%$ to $86 \%$, which is a gain over the 2010 range of $73 \%$ to $81 \%$ points correct. As in English language arts, students tended to receive more correct points on multiple choice questions than they did on open response and short answer questions. Yet, at most grades, the gain since 2010 in correct points for these open-ended questions is evident, particularly in the earlier grades. 8th grade was the one grade that did not make a gain over the previous year. Further investigation of the open response and short answer questions will be undertaken using the released questions for these items at each grade.

Performance on the strands of mathematics varied somewhat from grade to grade in each strand. For questions pertaining to the strand Number Sense and Operations, the percentage correct ranged from 77\% (grade 6) to 84\% (grade 3). In Data Analysis, Statistics and Probability, the range is greater: $75 \%$ (grade 6) to $89 \%$ (grade 4). Percentage correct in the other major strand -- Patterns, Relations, and Algebra - ranged from $80 \%$ (grade 6) to $87 \%$ (grade 8 ). An item analysis of questions that seemed particularly difficult for students at any given grade level will be undertaken to determine any areas of specific weakness that need attention.

Science \& Engineering - (See detailed scores in Appendix A, page 5)
Lincoln School students achieved modest gains in performance in their science scores since 2010, which continues a trend of improvement over the past four years. At grade 5, the percentage of students with scores at proficient or higher levels increased from $69 \%$ in 2010 to $74 \%$ in 2011. The change is characterized by a drop in scores at the "needs improvement level." For comparison, the combined science scores in advanced and proficient levels at the state are $50 \%$. At grade 8, scores also increased from $64 \%$ scores at proficient or higher levels in 2010 to $67 \%$ in 2011, characterized by a decline in scores at the Needs Improvement level but an increase in scores at the Warning level. The combined state scores are at $39 \%$ proficient or higher levels at grade 8 . A look at the grade 8 cohort shows moderate gains in scores at both advanced and proficient levels since these students were 5th graders in 2008.

An analysis of question type shows the same pattern as found in ELA and mathematics performance: students perform better on questions with multiple choice than on open response questions. As has been true in past years, $5^{\text {th }}$ graders tend to score higher on Open Response than $8^{\text {th }}$ graders - but that is also true across the state and may have to do with a difference in the demands of the questions at each grade. Lincoln students' scores for percent correct on Open Response are 14 points
above the state scores at both grades. Even though these results exceed the state performance by a clear margin, the district continues to focus on developing proficiency in responding to open-ended questions to develop students' skill in writing about their thinking in science.

Responses analyzed by the strands of science show a mixed picture. In all strands, Lincoln School $5^{\text {th }}$ grade scores of percentage correct were $75 \%$ or above. The greatest percentage of correct responses was in Technology/Engineering: 82\%. The patterns of responses on subtopics in each strand give science teachers some areas to investigate but only one is of concern: Earth's History. Unusually high scores ( $90 \%$ or higher) are evident in correct responses for the subtopics of Rocks, Magnetic Energy, and Engineering Design. At grade 8, responses to questions in each strand ranged from 74 to 78 percent correct, giving a fairly even performance picture across strands. Again, subtopic scores give science teachers direction in looking more closely at item analysis. In particular, a low percentage of scores occurred in the subtopic about the solar system and a high percentage of correct responses (over $90 \%$ ) was evident for seven different subtopics, spread among the three domains of science.

## Hanscom Schools

English language arts - (see detailed scores in Appendix A, page 1, 2)
Students in the Hanscom schools demonstrated a moderate performance in ELA. In grades 4-8, $71 \%$ of students scored at proficient or higher levels. The Hanscom School students' performance levels are often comparable to the state levels, although the 2011 results for grade 6 showed $80 \%$ of students scoring at proficient or higher levels compared to the state level at $68 \%$. Overall, the Hanscom students score at higher proficiency levels in the older grades, which also mirror the state results.

Most striking at Hanscom is the high turnover rate which makes cohort analysis very problematic. The cohort stability over the past two years ranges from $48 \%$ to $69 \%$. For example, when trying to compare 2011 MCAS results for 23 6th graders to their results as 5th graders in 2010, only $48 \%$ (11) of these students attended the Hanscom schools in 2010. Another example shows the high end of the stability range: of the 45 5th graders who took the 2011 MCAS test, $69 \%$ ( 31 students) were part of the grade 5 testing in 2010. Due to this high turnover, teachers and administrators at the Hanscom schools emphasize examining results on an individual basis rather than trace cohort progress.

Scores of students in subgroups at the Hanscom schools are difficult to interpret because of the very small numbers in each group at a grade level. However, the overall subgroup scores for students in grades 4-8 (see chart in Appendix B, p. 3), show little significant difference in performance between subgroups defined by race or ethnicity. Larger gaps in performance are evident between students in the disabilities category and their non-disabled counterparts.

An analysis of performance on different types of questions and in the strands of Language, Reading, and Writing reveal some strength across the grades in the topics of "vocabulary" and "understanding a text;" while areas of weakness vary from grade to grade. The proficient scores in "Long Composition" were similar in grade $4(62 \%)$ to grade $7(61 \%)$. Scores show greater strength in "conventions" than in "craft." As is true in the district, Hanscom students perform better on multiple choice than on open-
ended questions. Proficient scores on open response questions range from $45 \%$ at grade 5 to $55 \%$ at grade 8. The development of strength in answering Open Response and composing longer pieces of writing continues to be a priority at Hanscom and in the district.

Mathematics - (see detailed scores in Appendix A, pages 3, 4)
In mathematics at grades 3-6, students in the Hanscom schools scored somewhat higher than students across the state in percentage of scores at advanced and proficient levels. However, at grades 7 and 8 , the combined scores drop below $50 \%$, and are under the state scores. At the high end of the range, grade 6 students had combined scores of $74 \%$, which is 16 percentage points above the state level. The low end was at grade 7 with combined scores of $38 \%, 13$ percentage points below the state level. The school has responded to the low scores in several ways, outlined in the action steps in the closing section.

Scores of students in subgroups for grades 4-8 are displayed in Appendix B. As with the ELA results, the groups are small, making the interpretation problematic. However in mathematics scores, the differences subgroups defined by race and ethnicity are nonetheless significant. $33 \%$ of black students in grades 3-8 (21 students) scored at levels of proficient or higher whereas the combined score total for the whole group of 160 students was $51 \%$. This gap in performance is one of the drivers of the school and district effort to use interconnected strategies to narrow achievement gaps.

An analysis of mathematics performance on different types of questions shows that students in grades 3-8 tended to receive more correct points on multiple choice questions than they did on open response and short answer questions. Students in earlier grades earned a higher percentage of correct points for Open Response (a range of $68 \%$ to $74 \%$ ) than did students in grades 7 and 8 who scored at a level of $54 \%$ and $51 \%$ points correct respectively. The short answer questions were the most difficult type for students in younger grades. Further investigation of the difficulties associated with open response and short answer questions is already underway using the released questions for these items at each grade.

Performance on the strands of mathematics varied quite a bit from grade to grade in each strand. As was seen in the disparity in overall performance level, students at grades 7 and 8 had greater difficulty with the three major strands than did students in earlier grades. In Data Analysis, Statistics, and Probability, $60 \%$ of responses from 7 th graders were correct whereas at grade $4,86 \%$ of responses were correct. In Number Sense and Operations, $57 \%$ of responses from $8^{\text {th }}$ graders were correct in contrast to $78 \%$ correct at grade 6. For the third major strand -- Patterns, Relations, and Algebra - points correct ranged from $65 \%$ (grade 7 ) to $80 \%$ (grade 4). An item analysis of questions that seemed particularly difficult for students at any given grade level will be undertaken to determine any areas of specific weakness that need attention.

Science \& Engineering - (See detailed scores in Appendix A, page 5)

The performance scores in science and engineering at Hanscom show that many students at both $5^{\text {th }}$ and $8^{\text {th }}$ grades have difficulty achieving a proficient level of response to questions posed. The scores are comparable to state levels of performance. At grade 5, combined scores of proficient and higher are
at $50 \%$ (state $50 \%$ ) and at grade 8, combined scores are $42 \%$ (state $39 \%$ ). At both grades, scores were lower than those achieved by students at the same grades in 2010.

The high turnover rate at Hanscom is a major factor in the low science scores. Questions for the tests at grade 5 are based on state science standards in grades K-5. Success depends on students having participated in the district's science instruction for all of those years. In fact, a small percentage of students who take the grade 5 test attended Hanscom schools for even three years. Similarly, the grade 8 test questions are taken from the state science standards in grades 6-8 and students must have thoroughly studied all topics in those three grades to be successful. The challenge of students who are unprepared for the state science tests continues to be of great concern to the school and the district.

Nonetheless, a close look at question type and performance on strands and subtopics is important to discern patterns of performance that may reveal both strengths and areas for focused instruction. In both grades, students responded to multiple choice questions with greater accuracy than they were able to achieve in open response questions. At grade 5, more students were able to respond correctly to questions regarding the topics they studied during the 2010-11 school year. Higher scores are evident in Engineering Design, Magnetic Energy, Adaptations, and the Water Cycle. Not surprisingly, a similar pattern occurs at grade 8. An analysis of the released questions for 2011 showed some areas of strong performance on questions that correlated to grade 8 instruction: interpretation of graphs ( $100 \%$ correct - this is one of our district common assessments), understanding seasons, classification, and photosynthesis. Questions on many other topics did not reveal strong understanding and, in some cases, signal instructional areas that need more attention in grade 8.

## Part II Adequate Yearly Progress

Starting in 2003, the Massachusetts Department of Elementary and Secondary Education has adhered to the federal requirement of No Child Left Behind (NCLB) by making determinations of progress for each school and district, called Adequate Yearly Progress (AYP). The determination indicates how much progress districts and schools are making toward having all students reach proficiency in English Language Arts (ELA) and mathematics by the year 2014. A full explanation of AYP is to be found in Appendix D, which includes answers to the questions:

- What is AYP?
- What are Subgroups?
- What is "Accountability Status?"
- What are the Levels of Accountability and Assistance?
- What are the State Commendation Designations?

The way that AYP is calculated and the strictures surrounding the regulations have recently come into question nationally and at the state level. When the 2011 MCAS results were made public in mid September, 2011, it became clear that $82 \%$ percent of schools and $90 \%$ of districts did not make AYP. In fact, since 2003, the percentage of schools that have not "made AYP" has steadily increased, even though the test results show that an increasing number of students have gained in proficiency in ELA and mathematics. In late September, President Obama issued an executive directive allowing
states to apply for a waiver. This directive gives states the option of proposing an alternative system for assessing and monitoring student progress. Within days, Massachusetts Commissioner of Education, Mitchell Chester, applied for a waiver. Because our state has some of the most rigorous standards in the country, officials at the Department of Elementary and Secondary Education are confident that the state can utilize a better system of assessing district and school progress without using the current AYP formula.

Even though the use of AYP in Massachusetts may be discontinued, it is still in effect this year. Schools and districts are expected to follow the regulations and respond to the designated "accountability status." The AYP reports for the Lincoln district and each school are available in Appendix C. The following charts and explanatory points summarize the accountability status for our district and our schools.

| Lincoln District: Adequate Yearly Progress History |  |  |  |  |  |  |  |  |  | NCLB Accountability Status |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |  |
| ELA | Aggregate | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Corrective Action Subgroups |
|  | All <br> Subgroups | Yes | No | Yes | No | No | No | Yes | No |  |
| MATH | Aggregate | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Yes | No Status |
|  | All <br> Subgroups | Yes | No | Yes | No | No | No | Yes | Yes |  |

- The district met a high standard of AYP in ELA for all students but has not made AYP for subgroups over several years, which places it in "Corrective Action." A description of the requirements for corrective action is in Appendix D.
- The district has met a high standard for AYP in mathematics for all students and subgroups for the past two years. "No Status" means no improvement measures are required by the state.

## Lincoln School: Adequate Yearly Progress History

|  |  | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | Accountability Status |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ELA | Aggregate | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Corrective Action - <br> Subgroups |
|  | All <br> Subgroups | Yes | Yes | Yes | No | No | No | No | Yes |  |
|  | Aggregate | Yes | Yes | Yes | Yes | Yes | Yes | Yes | Yes |  |
| MATH | All <br> Subgroups | Yes | Yes | Yes | No | No | No | No | No | Subgroups |

- Lincoln School met a high standard of AYP in ELA for all students and subgroups. However, subgroups need to make AYP for two consecutive years for the school to return to "no status." Therefore, the school is in "Corrective Action." A description of the requirements for corrective action is in Appendix D.
- Lincoln School has met a high standard for AYP in mathematics for all students since 2003. However, performance of subgroups has not met AYP for several years, which places the school in "Restructuring Year 1", which is described in Appendix D.
- Lincoln School also received a commendation from the state for "Narrowing Proficiency Gaps." It is one of only 69 schools in the state that "substantially narrowed proficiency gaps for low income, limited English proficient, formerly limited English proficient, and special education students over a two-year period. ${ }^{11}$

| Hanscom Primary School: Adequate Yearly Progress History |  |  |  |  |  |  |  |  |  | NCLB Accountability Status |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |  |
| ELA | Aggregate | Yes | Yes | Yes | No | Yes | No | Yes | No | No Status |
|  | All Subgroups | - | - | - | No | - | - | - | - |  |
| MATH | Aggregate | - |  | - | Yes | No | Yes | Yes | Yes | No Status |
|  | All Subgroups | - | - | - | Yes | - | - | - | - |  |

- Hanscom Primary School did not meet AYP in ELA for all students this year. Because the school met AYP last year, it continues in "No Status." The number of students in subgroups is not large enough to report, according to the AYP formula.
- Hanscom Primary School did met AYP in mathematics for all students. It continues in the designation of "No Status," and therefore has no improvement requirements.

| H | m Middle Scho | ool: A | Adequ | ate Y | early P | Progre | , | ory |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | tus |
|  | Aggregate | Yes | Yes | Yes | Yes | Yes | No | Yes | No |  |
|  | All Subgroups | Yes | Yes | Yes | Yes | No | Yes | Yes | Yes |  |
| MATH | Aggregate | Yes | Yes | Yes | Yes | No | No | Yes | No | Improvement Year 2 |
| MATH | All Subgroups | Yes | Yes | Yes | Yes | No | Yes | Yes | Yes | mprovement Year 2 |

- Hanscom Middle School did not meet AYP in ELA for all students but did meet AYP for subgroups. Because Hanscom Middle School did not met AYP in 2009, this second year of not making AYP places the school in "Improvement Year 2." Requirements for this designation are described in Appendix D.
- Hanscom Middle School did not meet AYP in mathematics for all students for more than two years, which places it in "Improvement Year 2." The school did meet AYP for subgroups.

As per the requirements of AYP status designations, the district sent a letter to all parents on September 30, 2011 (See Appendix E). The Lincoln Administrative Council is working as a team to respond to each school's AYP accountability designation and to follow the requirements of each situation.

[^0]
## Part III Student Growth

In 2010, the DESE began using a new metric for assessing student growth in ELA and mathematics achievement. It is called the Student Growth Percentile (SGP) and it reflects a student's progress over at least two years of MCAS testing relative to that of students across the state who are considered "academic peers." The rate of growth is expressed as a percentile score, which is calculated using the performance scores of other students who have a similar test score history. The growth percentile, which is separate from the MCAS achievement score, adds to an understanding of student performance. While the achievement score indicates how a student performed relative to grade level standards in a given year, "the SGP provides a measure of how a student changed from one year to the next. ${ }^{2}{ }^{2}$ In several of its presentations, DESE argues that adding a growth percentile to the information on MCAS testing of a student's achievement on standards redefines performance:

$$
\text { Performance }=\text { Achievement }+ \text { Growth }
$$

The DESE cites several possible advantages to having the SGP as a data point along with the MCAS achievement results: ${ }^{3}$

- A student can achieve at a low level but still improve relative to his academic peers
- Another student could achieve well but not improve much from year to year
- Evidence of improvement is available even among those with low achievement
- High achieving students and schools have something to strive for beyond proficiency The use of SGP in the past year has begun to show that these points might well be important to take into consideration as each district assesses the progress of its students.

In the Lincoln Public Schools, students in grades $4-8$ who have taken the MCAS tests for at least two years have information about SGP in the MCAS results report sent home to families. The parent information chart includes achievement level and scores along with student growth percentiles for ELA and mathematics. For example, a 6th grader earned a scaled achievement score in ELA of 250 which places her at the Proficient level of achievement. Her SGP score is 48 - a percentile that places her in the middle of her academic peers and indicates that she grew as much or more than $48 \%$ of her peers. The DESE offers three points of guidance in using SGP scores:

- Typical student growth percentiles are between about 40 and 60 on most tests.
- Students or groups outside this range have higher or lower than typical growth.
- Differences of fewer than 10 SGP points are likely not educationally meaningful.

In the case of the example, her MCAS performance in ELA is a combination of moderate growth and proficient achievement. More examples and interpretation of student SGP scores will be presented at the School Committee meeting on October 20, 2011.

Using the SGP scores for groups of students makes it possible to gain perspective about the growth of one group compared to another or to show individual scores within a group context.

[^1]Appendix F displays "scatter plot" graphs of 2011 MCAS results for $4^{\text {th }}-8^{\text {th }}$ graders at each school in ELA and mathematics. The scatter plot graphs are developed by the Education Data Warehouse, an assessment branch of the DESE. In these graphs, colored dots represent individual performance plotted on two axes that relate achievement to growth. The Y axis indicates the scaled score on the MCAS test; a scaled score of 240 begins the "proficient" level of achievement. The $X$ axis indicates the growth percentile; scores in the range of 40 to 60 are considered typical growth. Only those students who have taken MCAS tests for at least two years have scores included on the graphs. Further explanation of these graphs and discussion of the implications will be presented at the School Committee presentation on October 20, 2011. As a district, we are just beginning to explore how an understanding of the data about growth and achievement on MCAS tests can assist us in interpreting individual and group progress.

## Action Steps

Each year, the release of MCAS results contributes to a district and school perspective on the amount of progress and level of achievement our students are attaining. We bring together state results with local assessment data in order to gain a more complex picture of student performance. Most importantly, we use our interpretation to influence planning and instruction in the current year. Action steps are underway in the district and at each school: they are not only based on the MCAS results this year, but they have been influenced by patterns of student performance in the past, discerned through examination of past MCAS results and local assessments.

First and foremost, the district has developed a focused and comprehensive plan to narrow achievement gaps and raise proficiency for all students. Presented at School Committee on October 6, 2011, this plan makes a commitment to five interconnected strategies designed to intensify our approach to promoting growth and raising achievement, particularly for those students who are members of subgroups.

A key feature of our district plan is a systematic approach to "Goal-focused interventions" which involve individualized, short-term instruction focused on a specific goal for a student. The student goal is developed based on available assessment data, parents are informed and involved, and progress is monitored throughout the intervention. These interventions are provided to students with a range of needs. One group of students who receive these interventions is identified by MCAS results: those students whose MCAS scores are in levels described as "Needs Improvement" or "Warning." Goalfocused interventions for students have already begun in all schools and will be discussed in greater detail at a School Committee meeting later in the fall.

Throughout this report, several action steps are referenced that address areas of concern signaled by the testing. Some steps are district-wide and others are specific to a school. Throughout the district, the writing initiative begun last year will continue this year with special attention to openresponse questions in all subject areas and the development of "craft" in longer pieces of writing. An item analysis is being undertaken of low achievement on any ELA and mathematics open response or short answer questions that have been released. This analysis will help us see more clearly the kind of difficulties our students encountered and plan instruction to remedy those issues. In science, a renewed
focus on writing about science thinking is underway and item analysis has been completed to understand areas of difficulty for our students.

Each school has planned action steps that are specifically aimed at their students' needs and are responsive to the school's AYP accountability designation. School Improvement Plans on both campuses have been revised, as required by their AYP status, to include goals that address issues of performance raised by the MCAS results.

At Lincoln School, administrators and teachers have reviewed the MCAS data and compared it to local subject area assessments to gain perspective on current student achievement and needs. While the mathematics and ELA achievement is high for the whole group, the main concern is the progress of students who are members of subgroups. Goal-focused intervention plans have been written for each student in need of targeted instruction. Communication among the student's teachers and with the parents has underscored the importance of a concerted effort to address the specific areas of need. Lincoln School principals and faculty members have begun a conversation about the implications of the AYP accountability status.

Hanscom Middle School has already taken several steps to meet the needs of their students in mathematics. The principal has initiated a school-wide mathematics goal. The schedule has been adjusted to increase mathematics instruction by 60 minutes per week for students in grades 6-8. Diagnostic tests in mathematics have been administered to pinpoint areas of strength and weakness. In Academic Extension periods for grades 6-8, Goal-focused interventions are underway for every student whose MCAS scores fell in the needs improvement and warning levels. Finally, teachers have organized mathematics support during lunch/recess for students struggling to complete mathematics homework. In ELA, Hanscom teachers have discussed and made plans to continue the writing initiative in every subject with special focus on development of craft and improvement of skill in open response.

In this district, teachers and administrators are united in our dedication to the growth and achievement of all students. The strong gains evident in individual and group MCAS results are cause for confidence in our program and appreciation of our students' hard work. The areas of difficulty are signals for the kind of thoughtful planning and focused instruction described in our action steps. We anticipate greater growth and higher achievement during this school year.

## 2011 MCAS Results: Appendices

## Appendix A

- 2011 Performance Levels: State, District, Schools by Grade in ELA, Math, Science
- 2008-2011 Cohort Performance Levels at Lincoln School by Grade in ELA, Math, Science/Engineering

## Appendix B

- 2011 Subgroup Performance Levels by grade in ELA and Math for each school

## Appendix C

- 2011 AYP reports: District, Lincoln School, Hanscom Middle, Hanscom Primary

## Appendix D

- Adequate Yearly Progress: Background and Explanation

## Appendix E

- Superintendent's AYP letter to families, September 30, 2011

## Appendix F

- 2011 Student Growth and Achievement: Scatter Plot Graphs of ELA and mathematics for Lincoln School and Hanscom Middle School, grades 4-8

2011 Adequate Yearly Progress (AYP) Data - Summary

|  | NCLB Accountability Status | Improvement Rating |
| :--- | :--- | :---: |
| ENGLISH LANGUAGE ARTS | Corrective Action - Subgroups | No Change |
| MATHEMATICS | No Status | No Change |

A district is newly identified for improvement if it fails to make AYP in the same subject area and all grade-spans, for students in the aggregate or any subgroup, for two consecutive years. A district will have no accountability status if it makes AYP in the same subject area for at least one grade-span for two consecutive years.

## 2011 Adequate Yearlly Progress (AYP) Data - Summary

|  | NCLB Accountability Status | Improvement Rating |
| :--- | :--- | :---: |
| ENGLISH LANGUAGE ARTS | Corrective Action - Subgroups | On Target |
| MATHEMATICS | Restructuring Year 1 - Subgroups | On Target |

To make AYP in 2011, a student group must meet (A) a student participation requirement, either (B) the State's 2011 performance target for that subject or (C) the group's own 2011 improvement target, and (D) an additional attendance or graduation requirement.

| Student Group | (A) Participation |  | (B) Performance |  | (C) Improvement |  | (D) Attendance |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Did at least 95\% of students participate in MCAS? |  | Did student group meet or exceed state performance target? |  | Did student group meet or exceed its own improvement target? |  | Did student group meet attendance (G1-8) or graduation rate target (G9-12)? |  |  |

## Appendix D: Adequate Yearly Progress

## What is Adequate Yearly Progress (AYP)?

Adequate Yearly Progress means the amount of progress that a district, school, or subgroup makes towards the NCLB target of proficiency in English Language Arts (ELA) and mathematics by 2014. Each state sets up its own plan and formula for progress which is submitted to the federal government for approval and results are reported each year. The Massachusetts plan has some of the most rigorous standards in the country. The state sets a proficiency target called a "Composite Performance Index" (CPI) in each subject and raises the bar every two years as depicted in the chart below. 2011 is the year when the state raised the bar for CPI in ELA to 95.1 and Math to 92.2. This represents a significant increase in expectations for proficiency since 2010. The formula calls for the bar to be at $100 \%$ proficiency in both subjects by 2013.

State Performance Targets for ELA and Mathematics, 2001-2014

In order to make AYP in Massachusetts, scores must meet targets in 3 out of 4 categories:

1. Participation - Percentage of students assessed should be at least $95 \%$.
2. Attendance - The percentage of school attendance rates by all students who took the MCAS tests.
3. Performance - The Composite Performance Index (CPI) score. CPI is an index score that is calculated by averaging performance scores for each student based on the following chart.

| Performance Category | CPI Points | MCAS Scaled Score |
| :--- | :---: | :---: |
| Advanced | 100 | $240-280$ |
| Proficient | 100 | $240-280$ |
| Needs Improvement - High | 75 | $230-238$ |
| Needs Improvement - Low | 50 | $220-228$ |
| Warning - High | 25 | $210-218$ |
| Warning - Low | 0 | $200-209$ |

In addition, scaled scores for students with special needs who took the alternative form of assessment are averaged into the district CPI totals. In order for a district, school, or group to make AYP in 2011, it is required to meet or exceed the state's 2011 CPI performance targets for ELA (95.1) and Math (92.2), or meet the Improvement gain target (see below).
4. Improvement - The gain (or shortfall) compared to the CPI gain target that was set by the state for a specific district. The target is established in reference to MCAS results for the district from prior years and mapped against the NCLB proficiency expectations.

AYP is determined using the following formula:

$$
\text { Participation }+ \text { Attendance }+(\text { Performance or Improvement })=A Y \mathbb{P}
$$

AYP determinations for districts and schools are made for aggregate groups for each subject (ELA and Math) as well as for subgroups of the student population in each subject. District AYP determinations are based on data for all students, including those based in private settings or educational collaborative schools for the purpose of receiving special education or other services. District AYP is reported in grade level clusters (gr. 3-5, gr. 6-8); school level AYP is calculated on the groups tested in each school for students enrolled prior to October $1^{\text {st }}$ in the testing year (Lincoln: gr. 3-8, HPS: gr.3, HMS: gr.4-8).

## What are Subgroups?

Subgroup reporting categories are: Special Education, Limited English Proficiency (ELL), Low-Income, African-American /Black, Asian or Pacific Islander, Hispanic, Native American, White. Just this year, the DESE added a subgroup: "High Needs" which includes students whose scores are reported in three groups: ELL, Special Education, and Low-Income. AYP determinations are calculated for student groups if "(1) 40 students or more assessed in each
year for which performance data is being analyzed and (2) the number of group members is at least $5 \%$ of the number of students whose assessment results are included in the school or district's aggregate AYP calculation, or (3) the number of group members is 200 or more."1 Because of the small size of the Lincoln Public Schools, subgroup reporting exists at the district level but in some cases, it is not reported at the school level due to low incidence of groups in a given grade span.

## What is "Accountability Status?"

Accountability Status is a determination for improvement made by the state based on the district's and its schools' history in making AYP. A district or school is identified for improvement if they fail to make AYP in a subject for two years. The improvement determination places the district and schools in the categories of action described below. The 2011 AYP results for the Lincoln Public Schools are available in Appendix C, which shows the history of results since 2003. In order to move out of any level of improvement status, the district or school must make AYP for two years in a row.

## Improvement Status Categories:

- No Status means that the district or school makes AYP for two consecutive years in the same subject; no action needed.
- Improvement Year 1 means that one or more schools did not make AYP in one or several areas for a second year. Therefore, the district must (1) notify parents, (2) require the school to revise its school improvement plan, and (3) provide the school with technical assistance. If any schools in the district did not meet AYP and received Title I funds, the parents of students in those schools must be offered the option to transfer their children to another school not identified for improvement, if available. In addition, $10 \%$ of Title I funds must be used for targeted professional development.
- Improvement Year 2 means that a district or school did not make AYP in one or several areas for a third year. Therefore, the district must notify parents, require the school to revise the school improvement plan based on new data and analysis of current findings, and provide schools with technical assistance. If any schools in the district receive Title I funds and did not meet AYP, the parents of students in those schools must be offered the option to transfer their children to another school not identified for improvement, if available. Supplemental educational services, funded by the district, must be offered to all low-income students in the school. In addition, $10 \%$ of Title I funds must be used for targeted professional development.
- Corrective Action means that a district or school did not make AYP for a fourth year in at least one area or must meet AYP for another year in order to return to "no status." All

[^4]requirements for Improvement Year 2 continue with the addition of specific corrective actions and public notification.

- Restructuring Year 1 means that a district or school did not make AYP for a fifth year in at least one area or must meet AYP for another year in order to return to "no status." All requirements from previous levels of accountability continue and the district must plan to take at least one structuring step specified by the NCLB statute. If the school becomes identified Restructuring Year 2, the district must implement the restructuring step.

## What are the Levels of Accountability and Assistance?

Every non-charter school with four consecutive years of assessment data is assigned an "Accountability and Assistance Level" of 1-5. ${ }^{2}$ Schools are placed in Level 1 or Level 2 based on their NCLB accountability status, described above. Lower levels of assignment occur for the lowest performing and least improving $20 \%$ of schools statewide.

- Level 1 is the assignment for schools with an accountability status of "No Status," "Improvement Year 1 or 2."
- Level 2 is the assignment for schools with an accountability status of "Corrective Action" or "Restructuring."

## What are the State Commendation Designations?

The state had defined designations to commend schools that make demonstrable progress in three areas:

- Narrowing Proficiency Gaps
- High Growth
- Exiting NCLB Accountability Status

The Accountability reports for these schools will display a "commended for" label followed by the category of commendation. ${ }^{3}$

[^5]
## Lincolin Public schools

September 28, 2011
Dear Parents and Caregivers,
The Massachusetts Department of Elementary and Secondary Education (DESE) has released the 2011 MCAS results. One measure of student performance is Adequate Yearly Progress (AYP). AYP, established by the federal No Child Left Behind Act (NCLB), measures the progress that students are making toward meeting educational standards. AYP results are reported for individual schools and districts in terms of progress for all students and for subgroups of students, e.g., low income, special education, classification by race, etc.

When this measure was enacted in 2004, it was designed to challenge, and hold schools accountable to ensure that all students become proficient in ELA and Math by 2014. However, the use of AYP has recently been identified as an inaccurate measure of school and district performance. Despite clear gains in proficiency in ELA and Math, in 2011 the AYP formula designated $82 \%$ of Massachusetts' schools and $91 \%$ of the state's districts as under-performing. Recently, President Obama has called for a reform to the NCLB with particular attention to AYP and invited states to apply for waivers. On September 27th, the Boston Globe reported that the Commissioner of Education in Massachusetts, Mitchell Chester, is considering applying for a waiver.

While the district performance overall is strong, we have not met AYP for subgroups for at least two years in a row and as a result the district and our schools have NCLB status designations of Improvement Year 2, Restructuring Year 1, or Corrective Action Year 1. Each of these designations requires certain actions by the schools and district. The designation for each school and summary of action steps currently being implemented are listed below.

In the Lincoln School district we support high standards and agree that closing achievement gaps is the right goal. Our district goals and school improvement plans focus on ensuring that every student makes strong academic progress.

Our commitment to standards-based assessment, instruction and reporting includes intervention for all students who are not yet proficient on MCAS.

## Lincoln School

The Lincoln School has been commended for narrowing proficiency gaps and has met AYP for students in total in English Language Arts and Mathematics every year since 2004, the first year that AYP results were reported. However, the school did not met AYP for all subgroups for at least two years in a row resulting in NCLB status of Corrective Action for Subgroups in ELA and Restructuring Year 1 - Subgroups for Mathematics. As a result, the school is required to rewrite its School Improvement Plan and to develop a Restructuring Plan while it implements curriculum and instruction to better address each students' learning needs.

```
Appendix E
```

Hanscom Middle School (HMS)
HMS has not met AYP for at least two years in a row since 2004 in ELA and Math, which results in an NCLB status of Improvement Year 2. As a result, the school must include a goal in the School Improvement Plan to address NCLB requirements. Since HMS is a Title I school, it is also required to offer supplemental educational services (SES) to low-income students. Information regarding SES will be sent directly to parents of qualifying students under separate cover.

## Hanscom Primary School (HPS)

HPS administered MCAS in English Language Arts and Mathematics in grade 3. Since the school met AYP in both ELA and Math in 2010, there is no NCLB Accountability Status this year. However, HPS did not make AYP in 2011 in ELA and the school will continue to focus on strong foundational programs in literacy and mathematics in an effort to meet all children's learning needs.

In summary it is very important that you know that we will continue to focus the district's resources to provide your children with the very best educational experiences possible. Our school improvement plans, district goals and work-plans clearly articulate the efforts we will make in the areas of teaching and learning, professional development and instructional design to ensure that our students succeed. These plans will be posted on the district's website and I encourage you to review them and to attend presentations about the district's educational programs.

I also want to encourage you to be involved with your child's school. We know that when there is a strong home-school partnership that our students -- your children -- succeed at higher levels. Thank you for your continued support. If you have any questions, please do not hesitate to contact Mary Sterling, Assistant Superintendent, your child's School Principal or me. I can be reached at 781-259-9409.

Sincerely,

Michael F. Brandmeyer<br>Superintendent
